CISC 897 – Research Methods in Computer Science
Fall 2016 – Assignment # 8

Due Nov 15th, 2016 via OnQ

Task 1 – Outline of final survey

As discussed in class, you should by now have chosen a minimum of 3 papers (since Assignment # 2) you wish to include in your final survey, after discussing your choices with your supervisor(s). These need not be the same ones you chose then, but must be the same ones you will base the final report on.

Please submit a document (1-2 pages) clearly stating your final survey outline. This should not be a mere list of headers or section titles. As discussed in class, this would typically constitute 2-3 header levels.

You may use IEEE or ACM templates to format your final paper. Here's are the links to get you started:

IEEE template: https://www.ieee.org/conferences_events/conferences/publishing/templates.html

ACM template: https://www.acm.org/publications/proceedings-template

Under each sub-heading, list the main points you will discuss. They have to follow a logical order. Please adopt a numbered style for section headers and sub headers (levels 1 & 2), and bullet points thereafter (levels 3+).

Your outline must include the 3 main references you will summarize, in addition to any other supporting references you plan to use (these are tentative).

Discuss this outline with your supervisor. Make sure they are in agreement with the outline before your submission on Nov 15th.
