CISC 897 – Research Methods in Computer Science
# Fall 2016 – Assignment # 5

Due October 24th, 2016 on onQ

Task 1 – Review # 2

Find a "solid" paper that is revered in your field – as discussed in class – and present a brief review of how well the authors presented their research plan, in light of the components discussed in class. Your review should not be a mere summary, and should extend beyond simply stating whether or not these components were addressed. You should evaluate the quality and depth in which they addressed them, and emphasize what you might have done differently, given your view of their work.

Please adopt a bullet-point form, and break down your review into sections. You can follow the headlines below, or adopt your own.

Here is the flow discussed in Lecture 5:

Task 2 – Research plan

This is your first endeavour in highlighting your research plan towards proving the assertions made in your main claim, as stated in Assignment # 4.

Please follow the components in the figure below to highlight your tentative plan for each of these phases.
